

Live Product Showcase

Real screenshots from a production KubeVirt cluster. Every feature shown is live and working at <https://185.165.240.5:5050>

Live Screenshots — Production Environment

Login & Dashboard

Secure PAM authentication and real-time cluster overview.

Login Screen

System-level PAM authentication. Supports local users, LDAP, SSSD. JWT token-based sessions.

Dashboard

Cluster overview: VM count, allocated vCPUs, memory, nodes. Host CPU/memory/disk gauges with load average. OS, kernel, CPU model. VM list with status. Recent Kubernetes events feed.

VM Management

Full lifecycle control with slide-out detail panel.

VM List with Details Panel

The screenshot displays a web-based VM management interface. The main header includes navigation tabs: v9s, Core, Infrastructure, Monitoring, Operations, and Security. A search bar is located in the top right corner. The primary section is titled 'Virtual Machines' with the subtitle 'Manage your KubeVirt VirtualMachines'. Below this is a search input field labeled 'Search VMs by name...'. A table lists the VMs with columns: Name, Namespace, Status, Ready, Node, Age, and CPU Trend. One VM, 'ubuntu-server2504', is listed in the 'default' namespace with a 'Running' status, 'True' ready state, '-' node, 'Unknown' age, and 'N/A' CPU trend. Below the table, it indicates 'Showing 1 of 1 VMs'. A slide-out detail panel for 'ubuntu-server2504' is open on the right. It features a 'Summary' tab and sub-tabs for Console, Metrics, Storage, and Network. The Summary tab shows a 'Running' status badge, 'N/A' CPU Usage, 'N/A' Memory Usage, and 'Unknown' Age. It also includes an 'Actions' section with buttons for Start, Stop, Restart, and Delete. A 'Basic Information' section lists Name (ubuntu-server2504), Namespace (default), Ready (True), Node (Not scheduled), and Age (Unknown). A 'Resource Allocation' section is partially visible at the bottom.

Name	Namespace	Status	Ready	Node	Age	CPU Trend
ubuntu-server2504	default	Running	True	-	Unknown	N/A

Basic Information

Name: ubuntu-server2504
Namespace: default
Ready: True
Node: Not scheduled
Age: Unknown

Resource Allocation

Click any VM to open the detail panel. Summary tab shows: status badge (Running/Stopped), CPU/memory usage, node, age. Action buttons: Start, Stop, Restart, Delete. Basic info and resource allocation.

Console Access

VNC, Serial, and SSH — directly in the browser.

VNC Console with Sendkey Toolbar

Full graphical VNC console via noVNC WebSocket proxy. Sendkey toolbar with Ctrl+Alt+Delete, Ctrl+Alt+F1/F2/F7. Fullscreen mode. Connection status indicator. Auto-reconnect.

Real-Time Metrics

WebSocket-streamed performance data with live charts.

VM Metrics Dashboard

Per-VM metrics via WebSocket: CPU usage (green), Memory usage (blue), Network I/O dual-line (RX purple, TX amber), Disk I/O dual-line (Read cyan, Write red). 60-point rolling history. No Prometheus required.

Storage & Network

Disk management, ISO mount, and network interface control.

Storage Tab — Attached volumes, ISO mount button

Network Tab — Interfaces, IP, MAC, Add Network

Mount ISO — Modal dialog, container disk URL, SATA CDROM, duplicate protection

Add Network — Pod/Multus types, Bridge/Masquerade/SR-IOV bindings

Storage Classes — View available K8s storage classes for PVC provisioning

Guest OS Info — OS name, version, kernel from QEMU guest agent

Snapshots, Events & YAML

Point-in-time backups, audit trail, and configuration editing.

Snapshots — Create, list, delete with status badges

Events — K8s events filtered by VM

YAML Editor

Full VM YAML configuration viewer with copy-to-clipboard. Edit and apply changes directly via KubeVirt API.

Host Information

Complete hardware and system inventory in 5 tabbed sections.

System Overview

Hostname, OS (AlmaLinux 9.7), kernel, CPU model (Intel Xeon E3-1230 v6), BIOS, vendor (Fujitsu). CPU 66%, Memory 52%, Disk 78% with gradient bars. Uptime 2d 21h.
